Pages included in website

Every site includes:

- Homepage
- Individual listing (advert) pages
- Category pages (one for each vehicle type, make, model etc)
- Search results page
- 'Privacy' page

Sites can also include a number of other static pages, created by us from content provided by the client. The most common include:

- 'About Us'
- 'Contact Us'
- 'Services'

Finally the sites can include pages with regularly updated content, such as 'News' or 'Blog'. In this instance the client would be given direct access to WordPress in order to update the page themselves.
